

ACTIVE PHARMACEUTICAL INGREDIENTS

from ESSENTIAL OILS

“

We at Düllberg Konzentra strongly believe in the importance of top-quality ingredients for the pharmaceutical sector and subsequently the health of our fellow humans. Therefore, we offer natural essential oils and their components of the highest purity for the use in medicinal products.

”

Our active pharmaceutical ingredients (API) are manufactured in compliance with the Good Manufacturing Practice (GMP) principles and the European Pharmacopeial requirements.

Own state-of-the-art distillation and rectification units allow us to maintain a consistent standard of our products despite natural fluctuations in the raw herbal materials. This standard is further ensured by our Quality Management System and validated processes.

In addition to our top-quality products, our regulatory affairs experts provide valuable support during the marketing authorization process and in the post-authorisation stage of the product lifecycle in Europe and beyond. With complete documentation in form of Active Substance Master File (ASMF), Certificate of Suitability (CEP) or individual solutions, we help you to comply with regulatory requirements.

Düllberg Konzentra produces and refines essential oils and fragrance compositions for the cosmetics, pharmaceutical, food, feed and chemical-technical industries. Each product of our broad portfolio is of the highest standard.
