DISCOVER NOW!

Cultavit®

Buckwheat Sprout Powder, where minerals and vitamins are embedded into the buckwheat as a matrix. Also available with wheat and spelt matrices if needed. The product is manufactured in Austria and offers a wide range of pre-formulated premixes. If required, a custom formulation can also be developed and produced.

Fibalance™

Partially Hydrolyzed Guar Gum (PHGG), with a very high content of soluble dietary fiber (up to 85%) and a very low molecular weight of 20 to 40 kDa. It is a non-GMO product, free from glyphosate residues, and completely gluten-free. It can be used both as a prebiotic and as a dietary supplement. Compared to ordinary prebiotics, it is significantly more beneficial for people with IBS (Irritable Bowel Syndrome) and FGID (Functional Gastrointestinal Disorders).

FulMINE™

Unique combination of humic acids and fulvic acids. This product is truly distinctive, binding toxins such as heavy metals, free radicals, and cellular debris due to the electronegativity of the two acids. It is an excellent detox product. Additionally, it contains the full spectrum of minerals and trace elements in chelated form, which have very high bioavailability.

Plantairy®

Instant Oat Powder is a product made from carefully selected oats. The oats undergo a complex production process that includes milling, enzymolysis, filtration, concentration, sterilization, and spray-drying technology. This process ensures that the oats retain all their valuable nutrients, oat flavor, and creamy taste, while also achieving excellent solubility. For this reason, it is well-suited for use in food and beverages.

SunPS®

Our PS represents high-quality phosphatidylserine that we offer from both soy and sunflower sources. We provide Non-GMO qualities in various concentrations ranging from 5% to 80%, available in both powder and 20% oil forms. At a 70% concentration, we are the only supplier on the market offering phosphatidylserine without flow agents (silicon dioxide). Our minimum order quantity (MOQ) starts at 10 kg, offering a significant advantage to customers since most phosphatidylserine MOQs start at 50 kg.

Starting in Q1 2025, we will introduce a marine-sourced phosphatidylserine with a high concentration of Omega-3-PS under the brand name **DHAPS®**. This product is scheduled for launch in Q1 2025.

SusCarb®

Our product consists of highly branched cyclodextrins with unique properties that are particularly beneficial for sports applications. It is highly soluble in water and features low osmolarity, as well as very rapid gastric transit. The product has a high molecular weight and is colorless, odorless, and tasteless. It serves as an excellent energy source for sustained athletic performance and also helps to reduce recovery times.

Oxyjun®

Is an extract from the bark of Terminalia arjuna. Oxyjun® is free from stimulating substances and has been extensively studied in clinical research. The extract's function has its roots in Ayurvedic tradition, where Terminalia arjuna is used to support heart function. Oxyjun® enhances cardiovascular endurance, reduces cardiovascular risk, strengthens heart performance, and improves pumping capacity. It increases VO2max and cardiac output.

Plantairy®

Instant Tibetan Barley Powder is made from highland barley (*Hordeum vulgare*, Poaceae) grown on the Tibetan Plateau. It is rich in a variety of nutrients, including bioactive carbohydrates, polyphenols, minerals, vitamins, phenols, flavonoids, and beta-glucan. The unique composition of highland barley contributes to its numerous health benefits, such as anti-inflammatory, anticancer, antidiabetic, antibacterial, anti-obesity, anti-aging, blood sugar-lowering, and cholesterol-lowering effects. Its particularly high content of bioactive components, including beta-glucan, makes highland barley especially effective in the prevention and treatment of conditions such as Alzheimer's, heart disease, and cancer.

Hydrolyzed Rice Protein

Our newly developed hydrolyzed rice protein is non-genetically modified, free from common allergens, and odorless. It contains a very high protein content of at least 80%, is highly soluble, and extremely stable. Our product features an improved taste, reduced grittiness, and bitterness, making it an excellent choice for a high-quality plant-based protein source.

PhytoD3™

Our vegan vitamin D3 in powder form with 100,000 IU/g and in oil form with 1,000,000 IU/g, derived from pine. Our vitamin D3 offers a high-quality and cost-effective alternative to vegan sources such as algae or lichen.

B-Lit Bacopa™

Bacopa monneiri is a powerful and unique ingredient designed to boost the holistic brain health. Bacopa is a perennial, creeping herb native to the wetlands of Southern and Eastern India, Europe, Africa, Asia and North & South America. Bacopa is famous for its holistic solution for brain health encompassing memory, focus & concentration, stress & anxiety and quality of sleep. Our Ingredient features BEAT (Bio Enhanced Active Technology™) to improve the poor absorption and low bioavailability usually Bacopa presents by its usage. This technology provides the enhanced bioavailability, an optimized absorption profile and sustained release. It is food grade solvent free technology which enhances the absorption profile and increases efficacy of Bacopa to show effect as early as Day 1. B-Lit Bacopa™ is backed by one of the most comprehensive single study ever done on Bacopa. The study includes 16 plus parameters at 7 different time points covering holistic brain health by measuring objective markers as Serum BDNF and Serum Cortisol.

KARALIV™

Is a standardized herbal extract blend to support and improve the liver function from:

Momordica Charantia - helps support the liver and normal glucose metabolism

Phyllanthus Niruri - helps maintain healthy liver enzyme levels

Andrographis Paniculata - helps aid digestion and support liver health

Brassica Rapa - helps support healthy liver function

Asparagus Racemosus - helps protect the liver from damage

Zingiber Officinale - contains liver health supporting agents

The efficacy of KuraLiv™ has been supported by clinical study which demonstrated decreased ALT, AST, Bilirubin and ALP levels.

Furthermore also a decrease in MDA and GGT as well as an increase in SOD was highlighting the KuraLiv™'s hepato-protective functionality.

Oxystorm®

The first extract from amaranth, a highly valued leafy vegetable in India, also known as red spinach. As a pseudocereal, amaranth has been widely consumed in Central Europe since the 1980s. Amaranth naturally contains nitrate (NO₃), a source of nitrogen, and is also rich in protein and potassium (8-14%). Consequently, the amaranth extract is one of the richest known sources of nitrate, with a standardized nitrate content of 9%.

Studies have shown that Oxystorm® significantly improves training efficiency by allowing athletes to sustain longer aerobic exercise. It enhances VO₂ max and serum lactate levels. The expansion of blood vessels contributes to increased blood flow and improved training capacity. The product is 100% water-soluble and can be incorporated into a variety of end products.

SHODEN®

Is a highly concentrated and bioavailable extract of Ashwagandha, a highly effective plant extract in Ayurveda. Ashwagandha is one of the most powerful herbs in Ayurveda and has long been used in Rasayana – the medicine for rejuvenation. As an adaptogen, Ashwagandha rejuvenates the entire system, especially the endocrine and immune systems. It significantly reduces stress and improves immunomodulation. Additionally, it helps to enhance testosterone levels and physical performance in sedentary individuals. Furthermore, it calms overactive nerves, promoting a restful and rejuvenating night's sleep.

RHULEAVE-K®

Is a blend of *Curcuma longa* and *Boswellia serrata*, both renowned in the phytotherapy world for their anti-inflammatory and pain-relieving properties. This formulation is particularly effective and consists of 100% natural plant ingredients. It is produced using SPEEDTECH® technology, a patented process that allows for rapid pain relief with a single 1000 mg dose. It has a very high safety profile (11 g/day) with clinical validation and 6 published studies.

CYNATINE® TOP

Is a **keratin hydrolysate** specifically developed for cosmetic applications. The raw material used is sheep wool, with a strong emphasis on the humane treatment of the sheep, as they must be sheared. Keratin is a structural protein unique to the animal kingdom and cannot be obtained from plant sources. It is a premium raw material free from slaughter by-products such as fish scales, chicken feathers, hooves, and horns. The amino acid profile of sheep wool is very similar to human hair. Due to its chemical structure, natural keratin cannot be absorbed by the human body. Therefore, our product is produced using a special process that cuts the keratin into very small fragments. This is followed by filtration to remove insoluble parts of the keratin, and then it is spray-dried. The result is a 96% hydrolyzed keratin that is bioavailable and bioactive. The product has been successfully tested and validated through multiple clinical studies.

CYNATINE® HNS

is a **keratin hydrolysate** specifically developed for dietary supplement applications. The raw material used is sheep wool, with a strong emphasis on the humane treatment of the sheep, as they need to be sheared. Keratin is a structural protein unique to the animal kingdom and cannot be obtained from plant sources. It is a premium raw material free from slaughter by-products such as fish scales, chicken feathers, hooves, and horns. The amino acid profile of sheep wool is very similar to human hair. Due to its chemical structure, natural keratin cannot be absorbed by the human body. Therefore, our product is made using a special process that cuts the keratin into very small fragments. This is followed by filtration to remove insoluble parts of the keratin, and then it is spray-dried. The result is a 96% hydrolyzed keratin that is bioavailable and bioactive. The product has been successfully tested and validated through multiple clinical studies.

MELALINE®

Is a **keratin hydrolysate** specifically developed for cosmetic applications aimed at skin protection. The raw material used is black sheep wool, and MELALINE® is naturally rich in melanin (the tanning pigment) and is manufactured in France. It is a soluble and bioactive proteomelanin complex that significantly enhances skin pigmentation and epidermal regeneration. MELALINE® promotes the transformation of melanocytes into keratinocytes, which, when exposed to sunlight, leads to melanin production. The increased melanin results in tanning, with the intensity of the color increasing over time, leading to delayed pigmentation.

MELATINE®

Is a **keratin hydrolysate** specifically developed to combat gray hair. The raw material used is black sheep wool. MELATINE® is a soluble and bioactive proteomelanic complex that helps to repigment gray hair. MELATINE® is not an external hair colorant but an innovative active ingredient for dietary supplements.
